

SC-T, Flying Lead Contact Temperature Sensor

Features

- Strap-On mounting for pipes or arched surfaces
- Thermistors and PT sensing elements to fit your system
- Simple installation
- Wide range of temperature probes
- Including 2m (6.5ft) wire

Applications

- Measure temperature for heating, ventilation and air conditioning applications
- For heating or cooling mode detection in 2-pipe systems
- As frost protection sensor
- As input for standard controls equipment

Temperature sensor

The sensor measures the temperature by use of a glass packed thermistor with a negative temperature coefficient (NTC), a platinum film (PT) or a nickel thin layer (NI) based probe. Its resistance changes according to the temperature. The change follows a specified curve. A summary of such curves is printed on the back of this document. Contact our sales department for curves or sensing elements not yet listed below.

Compensating conductor resistance

The length and type of conductors used to connect the sensor to the measuring electronic influences the accuracy of the measurement. Especially for elements with low resistance this has to be taken into account. Compensation needs to be performed by the measurement electronics.

Technical Specification

Warning! This device is intended to be used for comfort applications. Where a device failure endangers human life and/or property, it is the responsibility of the owner, designer and installer to add additional safety devices to prevent or detect a system failure caused by such a device failure. The manufacturer of this device cannot be held liable for any damage caused by such a failure.

Failure to follow specifications and local regulations may endanger life, cause equipment damage and void warranty.

Installation

- Mount the sensor on a supply or return pipe depending on application.
- Make sure the maximum allowed temperature limit is not exceeded.
- For better temperature transfer between sensor and medium use heat conducting paste or heat conducting pads.
- If possible place the sensor on the upper side of the pipe to prevent permeation by condensate.
- Bend the wings of the contact sensor to fit to the radius of the pipe.
- Place the heat conducting pad or liquid between pipe and sensor and use the tightening strap to fix the sensor to the pipe. Use moderate torque, do not crush the sensor.
